Pet Safety

All members of your family need to be kept safe when it storms, and that goes for pets, too! Things to remember:

- If you have to stay at a public shelter, pets are not allowed. Plan stay at a pet-friendly motel or arrange a pet shelter ahead of time.
- Make sure your animals are up to date with vaccinations, including kennel cough.
- Have your identification on their collar and keep a leash handy at all times.
- Stock enough clean water and food for your animals.
- After the storm, take the same precautions as you would with a child: check the area for downed lines or hazards and be sensitive to their potential confusion.

Your Electric Cooperative is pleased to offer information on the following programs and services:

- Bank Draft
- Co-op Connections Member Benefit Card
- Duel Fuel Rebates
- Energy Advance Loans
- Fixed Budget & Levelized Billing Options
- Geothermal Heating & Cooling Rebates
- HomeAdvantage 5% Loans
- Pre-paid Metering
- On-line Bill Payment
- On-line & In-home Energy Audits
- Outdoor Lighting
- Propane Fuel & Products
- Renewable Energy
- Surge Protection
- Walmart Bill Payment Option
- Water Heater Warranty & Repair
- Water Heater Rebates

Call your local Berkeley Electric Cooperative office and ask to speak with a customer service representative for additional information on these programs or visit our website

The Touchstone Energy® symbol is your assurance that we're a community-minded cooperative providing high standards of service to customers large and small.

Berkeley Electric Cooperative, Inc. is an equal opportunity and provider.

Storm Safety

Be prepared for dangerous weather any time of the year

Don't let weather-related outages leave you powerless. Follow these electrical safety tips.

BEFORE

- Locate and check your fire extinguisher, first aid kit, and emergency supply kit. Check with the American Red Cross at www.redcross.org for a complete listing of what your kits should include. Make sure you have canned or nonperishable food on hand for a few days. In the winter, put aside extra blankets. Don't forget a non-electric can opener!
- Store water. This is handy in case of loss of water and sewer, flooding, or water pipes freeze.
- Have the phone numbers of evacuation destinations or safe places to stay, as well as a road map to show alternate routes if major roads are closed or clogged.
- Keep insurance and other vital documents in a safe place.
- Check to see if shrubs or trees need trimming or if you have any weak limbs. If trees or shrubs that need trimming are located near power lines, contact professional tree services. Also, remove items near the home that could possibly become airborne (toys, lawn or patio furniture, trash cans, etc.).
- Have a battery-powered radio on hand. Listen to local radio or TV stations for up-to-date storm information or evacuation orders.
- In the case of a hurricane, prepare to cover all windows of your home. If shutters have not been installed, use precut plywood. Contrary to popular belief, tape does NOT prevent windows from breaking.
- Fill your gas tank before a storm arrives, as gas pumps do not work if electricity is out. Automatic teller machines will also be shut off if the power goes, so get some cash to have on hand.
- Plug appliances into surge protectors or have a system installed to safeguard electronics and appliances from serious damage.

18

DURING

- If you are not told to evacuate, stay indoors and away from windows.
- Be aware that the calm during the hurricane "eye" is deceptive. Once the eye passes over, winds blow from the opposite direction.
- Stay clear of flood waters. If you come upon a flooded road, find another, safer route.
- Avoid using the telephone during a storm. Electric shock is possible through phone lines (unless it's cordless). Also avoid water sources (shower, sink and bathtub) as lightning can enter a home through plumbing.
- Disconnect electronic equipment such as TVs and computers to help avoid electronic surges.

AFTER

- Keep listening to local radio or TV stations for instructions. If you evacuated, only return home when local officials say it is safe.
- Use a quality flashlight and not candles for illumination, as there may be a gas leak.
- Leave on a single light to alert you when electric service is restored.
- Disconnect sensitive electronic equipment in advance of the surge that can occur when power comes back on.
- Minimize opening freezers and refrigerators. A fully loaded freezer can keep food frozen for up to 48 hours if the door has not been opened.
- If your neighbor's power is restored and yours is still out, it could be because of a blown fuse or tripped circuit breaker in your home. Your neighbor's home could also be supplied with electricity from a different electrical supply circuit.
- Stay clear of fallen utility lines and avoid tree limbs and debris that could hide fallen lines. The limbs may carry electricity, especially if they are wet.
- Do not pile debris near utility poles or other electric devices after cleaning up outside.
- Report all outages and downed lines immediately with only one call per household.

Generator Safety

Portable generators are helpful in the event of a temporary power outage, but misuse can cause serious harm or death. To protect yourself, your neighbors and co-op line personnel, please follow these tips when using a back-up generator.

- Before you use your generator, thoroughly read and understand all of the manufacturer's instructions.
- When a generator is not properly installed, it can "backfeed" through the transformer and produce an output of 7,200 volts through the co-op's distribution line. This could injure or kill you, your family, your neighbors, or utility crews working on the line.
- Isolate your generator from the co-op's power lines and connect appliances directly to the generator with the appropriate size grounded three conductor electrical cords. It is recommended that you also open the main breaker inside the breaker panel at your home.
- If you connect a generator directly through your home's wiring, be sure a double-throw or transfer switch has been installed to separate it from the co-op's system. The switch must be equal to the current rating of the electrical service in your home and not the rating of the generator. For instance, if the electrical service of your home is rated for 200 amps, the switch must be 200 amps.
- Never refuel a generator while it is operating.
- Provide adequate ventilation and air-cooling around the generator to prevent overheating and the accumulation of toxic exhaust fumes.
- Do not install generator in a basement, attached garage, or any closed area. The exhaust gases from the generator contain carbon monoxide, an invisible, odorless, poisonous gas.
- Maintain your generator engine according to the maintenance schedule for peak performance and safety. Regularly test your generator.
- Keep gas fresh. If you do not plan to use your generator for up to 30 days, stabilize the gas with a gas stabilizer.
